

Abstract

A dielectric layer for use in electronic devices can be obtained from a polymerizable mixture containing at least one organic amine derivative, which is capable of forming a crosslinked polymer with itself and/or with at least one multifunctional compound, and/or its crosslinked polymer product obtainable by crosslinking said amine derivative with itself or with at least one multifunctional compound. Thus, the polymerizable amine mixture can advantageously be used in a process for the manufacture of a dielectric layer of an electronic device.
